TASTING NOTES
Pale gold in color, lemon, minerality and dried herb aromas fill the glass. The medium-bodied palate opens displaying beautiful texture and movement of flavors including lemon creme, lime zest, quince, honey and baking spice, all framed by balancing acidity and a lingering finish.

All of our Estate Vineyards are Certified Sustainable

TECHNICAL DATA
Grape Type: Chardonnay
Appellation: Willamette Valley
Soil Type: Jory (iron rich volcanic), Nekia (shallow, iron rich volcanic), Laurelwood (windblown loess) including Pisolites and Missoula Flood sediment.
Clones: 76, 96, 352, Draper
Harvest Statistics
Harvest Date: Sept. 25 - Oct. 18, 2017
Brix: 22.0°
Titratable acidity: 6.20 g/L
pH: 3.30
Finished Wine Statistics
Alcohol: 12.50%
Titratable acidity: 5.58 g/L
pH: 3.31
Fermentation: French oak & stainless steel barrels
Barrel Regimen: 10 months in barrel, 28% New French Oak
Bottling Date: July 2018
Cases Bottled: 1,000

VINTAGE FACTS 2017
After a few dry winters, the 2016-17 winter provided ample rain and snowpack statewide. The winter gave way to a relatively cool and wet spring compared to the last few years. As a result, bud break in Oregon started closer to normal in mid-April. The spring warmed up with record heat in late May that initiated flowering in most areas of the state. However, a cool down in early June slowed flowering through the second and third week of the month then was followed by a few days of record high temperatures. Growers statewide noted that flowering was very complete and produced a very good fruit set. Many also indicated that the warm conditions in 2016 set the stage for increased fruitfulness, producing more clusters per vine and larger clusters.

July ramped up the heat moving the vintage rapidly to veraison. However, August saw multiple one day records for maximum daytime temperatures with heat stress events early and late in the month. The result was that August 2017 was the warmest August on record in the state and the majority of the western US. Growers noted that the heat stress did not produce much sunburn but may have delayed ripening in some varieties. There was no impact of smoke from forest fires on Willamette Valley producers, unlike Southern Oregon and the Columbia Gorge AVAs, except that the possible disadvantages of the hazy weather during early stages of ripening reduced sunlight intensity and could have caused reduced photosynthesis.

A warm early September accelerated fruit development, but was slowed by a cool down mid-month. Feeling that the harvest was going to be fast and furoius, growers breathed a sigh of relief with the cooler conditions and proceeded to have a slow and steady harvest. From grower reports, 2017 ended with near average to slightly higher than average sugar and acid levels with many touting beautiful flavors and well-balanced fruit.

THE VINEYARDS
Estate Vineyard: Planted in 1983 by Founder Jim Bernau on a south facing volcanic flow, the vineyard has 53 acres of vines at 500 to 750 feet in elevation. The first Dijon clones were planted in 1993. The Nekia and Jory soils are well drained to a depth of one and a half to six feet.

Tualatin Estate Vineyard: Established in 1973, Laurelwood soil covers most of the vineyard — formed over thousands of years on layers of wind-blown, glacial silt called loess. High concentrations of rusted iron balls called pisolites riddle the top layer and are caused by the weathering of minerals in the soil. This unique soil profile contributes to the Pinot Noir’s complex nature and rose petal aromas.

Elton: In 2006, Wine & Spirits listed it as one of the five key vineyards in the new Eola-Amity Hills American Viticultural Area. In 2007, Elton Vineyard was named one of Oregon’s top vineyards by Wine Press Northwest. Planted in 1983, the vineyard now includes sixty acres on east-southeast slopes of the Eola Hills. The elevation rises from 250-500 feet, and the soil is Jory and Nekia.

WINEMAKING NOTES
The focus of this wine is on the combination of all of our clones in our three Estate Vineyards, the majority being Dijon clones, which are particularly suited to our cool climate. Creaminess and richness, with balanced oak, acidity and forward fruit is the goal. The grapes were picked at peak ripeness, and lightly whole cluster pressed to avoid phenols. The juice was cold settled and racked to barrels where it was inoculated with selected yeast strains. Fermentation lasted approximately five weeks at 60-65° F. The barrel lees were stirred twice monthly through malolactic fermentation which finished in March. Aging was sur lee until July, when racking took place via Bulldog pup, (a nitrogen pushing system).

FOOD & SERVING SUGGESTIONS
Steamed mussels with white wine & garlic, butternut squash & sage ravioli, Oregon salmon cakes, lobster bisque and soft cheeses.
